

LS Series

Papilon Live Scanners

Papilon's live-scanning fingerprint scanners are designed to capture fingerprints and send them to a database for later inquiries. Each scanner is designed to be used in different situations and equipped with various capabilities that fit the security needs of different organizations. Thanks to their impact-resistant design, Papilon fingerprint scanners can be carried to every corner of the world and are suitable to be used in the field. They can operate under extreme environmental and climatic conditions and excessive moisture.

LS-01

Livescan Single Fingerprint Scanner

The smallest member of LS scanners, LS-01 is designed to ease identity checks in the field. Its size makes it ideal for use in mobile terminals and units.

LS-11

Livescan Dual Fingerprint Scanner

LS-11 is a fingerprint scanner that is able to take rolled and flat prints of all fingers one by one and run identification and verification requests.

LS-1101

Livescan Palmprint Scanner

LS-1101 is a finger and palm print scanner that takes rolled and flat prints besides palm-side prints. Its capabilities make LS-1101 especially suitable to be used in criminal procedures.

LS Series

LS-1101 S

Livescan Palmprint Scanner with Screen

LS-1101 S is a finger and palm print scanner that takes rolled and flat prints besides palm-side prints. Its capabilities make LS-1101 S especially suitable to be used in criminal procedures. Thanks to the screen feature, it is easier to view the traces you have received.

LS-4421

Livescan Tenprint Scanner

LS-4421 is a real-time fingerprinting device that scans both flat and rolled fingerprints. In flat fingerprinting, four fingers of each hand, starting with the index finger, are placed on the device, then both thumbs are placed on the scanning surface for simultaneous scanning. In rolled printing, the finger is rolled from one edge of the nail to the other. Prints taken with LS-4421 are recorded to be sent to the central dataset.

LS-4421 S

Livescan Tenprint Scanner with Screen

LS-4421 S is a real-time fingerprinting device that scans both flat and rolled fingerprints. In flat fingerprinting, four fingers of each hand, starting with the index finger, are placed on the device, then both thumbs are placed on the scanning surface for simultaneous scanning. In rolled printing, the finger is rolled from one edge of the nail to the other. Prints taken with LS-4421 S are recorded to be sent to the central dataset. Thanks to the screen feature, it is easier to view the traces you have received.

LS-FA

Livescan Footprint Scanner for Adults

With a wide range of scan areas, you can manage your footprint operations very easily with LS-FA for adults.

LS-FB

Livescan Footprint Scanner for Babies

With a wide range of scan areas, you can manage your footprint operations very easily with LS-FB for babies.
